EDUCATION

B.Sc. in Computer Science & Engineering

Independent University, Bangladesh (IUB)

Dec 2021 ■ CGPA 3.23/4.00

CORE SKILLS

Languages

TypeScript, JavaScript (ES6+), Go, Python, SQL

Frontend

React.js, React Native, Redux, HTML, CSS, SASS

Backend

Node.js, NestJS, Flask (Python)

Data

SQL, relational data modelling, database design, hand-written queries, Metabase

Architecture

REST APIs, Microservices, Event-Driven Queues, Nx Monorepo

Infrastructure

AWS, Docker, Linux (daily driver), Git

Practices

Test-Driven Development, PR Reviews, Mentoring, Interviewing, AI-Assisted Development (Claude Code, Codex, Pi)

Profile

Software Engineer with 6+ years across the full stack, working offshore with a Canadian product team. Architected a fintech platform end to end as its first engineer - React and React Native on the front, NestJS microservices on AWS behind it, built test-first throughout. Adapt quickly to new stacks and tools, including AI-assisted development workflows, to keep delivery fast without cutting corners.

Experience

Software Engineer L4

Jan 2022 – Present

Sazim Tech Ltd

sazim.io

Software company delivering products for clients in Canada & the USA

- Joined as the first engineer and architected manzil.io for **Manzil**, a Canadian fintech - **Invest**, **Homes** (mortgage), **Wills**, and **Money**, across web and native mobile.
- Worked with product and business stakeholders to translate investment, mortgage, payments, and customer-management processes into production features.
- Built the web portal in React and Redux and the iOS/Android apps in React Native, sharing types and API clients across web and mobile from the Nx monorepo.
- Use test-driven development across the web platform, writing automated tests alongside feature development.
- Evolved the initial Flask/React stack into an Nx monorepo of Dockerized NestJS microservices, with the original Flask backend still serving production alongside it.
- Fixed an AWS Lambda hitting the 15-minute execution ceiling - offloaded work to an async queue, then rewrote it in Go with goroutines, cutting runtime well under the limit.
- Built Stripe payments and subscription billing end to end for the Wills product.
- Write the SQL behind the company's Metabase analytics, turning production data into the dashboards and charts the business reports on.
- Oversaw delivery of **Hisba**, a separate product, directing two engineers through the build.
- Conduct regular code reviews and mentor new hires and trainees through onboarding, while contributing to engineering interviews.

Junior Software Engineer (Intern)

Sep 2021 – Jan 2022

LEADS Corporation Limited

leads.com.bd

Built features for the Shahjalal Islami Bank banking portal using Angular.

Web Developer

Jan 2021 – Jul 2021

Avenueur Solutions

Delivered client web products on ASP.NET Core and React.js - **Home-land**, an affordable housing platform (Gazipur) on a CQRS architecture; **Senoark**, a marketing consultancy site; and the **Avenueur Solutions** company site in TypeScript.

Web Developer

Jan 2020 – Dec 2020

Cerulean Creative Technologies

Built **CarHouse** and other smaller client projects with React.js.

Projects

The Deltagram

thedeltagram.com

- News platform for a Bangladeshi audience, built with a small team - React.js frontend, Node.js/NestJS backend, Dockerized on DigitalOcean behind a Cloudflare CDN.
- Built scheduled article publishing on a BullMQ job queue, still running in production today.
